## Summary

I am a curious and determined student, with a genuine passion for computer science and robotics. I navigate the world of technology with a calm yet methodical approach, I believe that great ideas stem from listening, observing, and thinking carefully before acting. Artificial intelligence, a fertile ground where computer science and robotics meet and enhance each other, is one of the fields I find most stimulating and that I explore in my own time. Every project is an opportunity to investigate how technology can interact with the surrounding world in increasingly intelligent ways. Determination is what drives me: when I come across a complex problem, I don't stop at the first obstacle. I stop to understand it and look for an innovative solution. I am always open to exchanging ideas with those who share the same curiosity about the future of technology.

## Experience

Istituto Parri - Milano

Curricular Internship (Italian PCTO)

January 2025 - June 2025 (6 months)

Milan

Fumata Bianca - Text-Based RPG (Python · Team Project)

Developed a text-based interactive narrative game set in Renaissance Italy, where players navigate political and religious choices on the path to becoming Pope. The project involved branching storylines, a multi-stat character system, and support for five languages.

Collaborated within a team, contributing to software architecture, game logic development in Python, and project coordination across multiple releases.

The project extended beyond the scope of the program itself, continuing to be actively developed and maintained after its conclusion, reflecting a genuine personal investment in the work.
